(54) Title: **USB HOST CONTROLLER WITH MEMORY FOR TRANSFER DESCRIPTORS**

(57) Abstract: An electronic device, operating as a USB host, has an embedded processor and a system memory, connected by a memory bus. A host controller integrated circuit does not need to master the system memory, but instead acts purely as a slave. The embedded processor is then adapted to write the data to the host controller integrated circuit in the form of transfer-based transactions.
